Kafrit Masterbatches and Compounds

Giving Life to Plastic
Kafrit Group is a leading producer of Masterbatches and Compounds for the plastics industry and currently employs more than 400 people. In 2015, the Group achieved a 191 million $ turnover with an available capacity of more than 82,000 MT. Moreover, the company is active on a global scale and has set up production sites all over the world. All of this began in 1973 when the company was founded in Israel. Since then, the company has grown primarily via acquisition.

Today, the Kafrit Group incorporates Kafrit Industries (1993) Ltd. in Israel, CONSTAB Polyolefin Additives GmbH in Germany, China’s Suzhou Constab Engineering Plastics Co. LTD and the Canada-based Kafrit NA Ltd. With more than 44 years of experience in the plastics processing industry, the company can draw on high levels of expertise and technical know-how. Kafrit Group places a high value on sustainability and has made it to one of the cornerstones of our corporate strategy. Our unbridled dedication to environmental, social and financial issues makes us to one of the leading business partners in the plastics industry. Our customers value our passion and appreciate our ecological awareness and social commitment. Moreover, they recognize our world leading services and consider our products as among the best within our industry.

We develop and produce cost-efficient solutions which will enhance the completion of high-quality end products in many areas of the plastics industry, such as packaging films (BOPP, CPP, PE), PC sheet, agricultural films and derivatives, biopolymers, flame retardant applications, PEX pipes, fibers and nonwovens. Along with many other products, the Kafrit group supplies the following Masterbatches and Compounds:

- Acid Scavengers
- Antiblock
- Antifog
- Antimicrobial Agents
- Antislip
- Antistatic
- Color Concentrates
- Flame Retardants
- Fillers
- Foaming Agents
- IR Absorbers
- Light Stabilizers
- Lubricants
- Matting Agents
- Metal Deactivators
- Nucleating Agents
- Optical Brighteners
- Processing Aids
- Purge Agents
- Release Agents
- Slip Agents
- UV Absorbers
- UV Blockers
- White Masterbatches

Defining new production goals: Experience the new high performance products.
Research that takes us to the top
Throughout our company history, research and development have always been a key area of our expertise. Kafrit employs a staff of more than 400 people that work on innovative products and make use of our vast pool of knowledge that we developed in our 44 years of experience in the plastics industry. Our experts optimize and develop additive concentrates, flame retardants, color concentrates and compounds for various applications. Kafrit enjoys a close partnership with renowned research institutions at the Shenkar University in Israel and at different universities in Germany. Moreover, we maintain a strong cooperation with well-known suppliers including machine manufacturers who recommend our products for use in combination with their machines.

Our vision:
We aim to be the preferred technological partner of the plastics industry by continually supplying our global customers with innovative and high quality solutions that are fitted to their specific needs.
Polycarbonate

Kafrit UV compounds are designed and tailored according to the customer’s specifications and Kafrit’s vast experience in this field. All Kafrit solutions are colored with a bluish tint to hide the UVA yellow shade, and contain optical-brightener to enable layer identification by the sheet producer. Kafrit is offering unique coloring abilities to meet customer demand.

The compound flow properties are a key factor in uniform and stable layer distribution across the sheet’s width. The Cap Layer flow is determined by the PC resin type, lubrication system level and, most importantly, the UV absorbers types and level.

Kafrit solutions offer an optimized MVI based on years of experience. Our know-how allows us to offer a variety of MVIs according to the final application and production process. We use different types of UVA compounds and Masterbatches to insure optimal UV protection, process optimization and the best value each and every customer needs for their products.

The UVA types differs in their chemistry, price and plate out level. Kafrit recently developed new line of products that significantly improves performance in terms of plate out. Our new improved technology allows sheet producers to increase significantly the working interval between cleaning, therefore adding significant value to production efficiencies.

1. UV Cap Layer

Most PC sheets are protected by a thin co-extruded layer (Cap Layer). This layer is based on PC resin, enriched with a high level of UV absorbers. The recommended layer thickness is taking into consideration the layer erosion over the service life and the UV additive optical density, so no harmful UV light will penetrate the Cap Layer to the unprotected Polycarbonate.

2. Anti-Glare

The purpose of this product group is to eliminate the sheets' glossy surface appearance. As this is a surface phenomena, the AG products are always combined with UVA and applied to the sheets in the same manner as the UV cap layers.

The effect obtained can also be referred to as a "matt-effect". The AG products are based on cross-linked polymeric spheres (similar to the light diffuser additives) that create a kind of micro-structure on the surface and, as such, interfere with the glossy appearance. The AG products contain different types of polymeric spheres, with different diameters. Both parameters are very important factors in the AG's performance, appearance and processability. It is recommended to apply the AG compounds at a layer thickness of 40-50µ to get the best effect.

“Kafrit is very flexible regarding changes in delivery times. We appreciate the great reliability.”
3. Heat Management

In today’s world energy savings are essential and play an important role in designing the world’s future. The major global trends such as climate changes, mobility, growing population and increasing urbanization requires by better solutions to insure: zero emissions, low energy building, efficient and lightweight transportation, better housing structure and system and more efficient public infrastructure.

More than 50% of the light is invisible and translates into heat (NIR). This heat is accumulated under cover spaces and requires energy in order to control the temperature under such structures.

Kafrit NIR PC and PMMA Masterbatches are designed to insure that NIR is reflected and therefore allow architects and other users to insure that covered spaces are efficient and cost effective. With our versatile portfolio while using unique proprietary we offer a wide range of optimized solutions to answer tomorrow’s demand.

Additional IR Products
All products available as compound:
- Designed for a co-extrusion layer of 50µ, under the UV layer.
- Designed for a co-extrusion layer of 50µ combined with UVA for a single-layer implementation.
"I greatly appreciate the reliable handling and top quality. The technical support is excellent and the staff are always there to help."

5. Flame Retardants

The Single Burning Item standard (SBI) EN 13823 is the main building standard for PC sheets in Europe. The same goes for the ASTM E84 in North America. In addition to the various required standards in different countries, the PC sheet geometry, type of polycarbonate resin mixed with the FR MB, thickness and weight have an important impact on the FR performances.

The various factors described above are used by our experts and customers alike to offer a suitable solution so as to fulfill the requirements of the standards.

Our lab developed skills and an extrapolation method of Flame Retardants to evaluate the FR performance using UL-94 and LOI tests. Different building standards require different testing methods using the final sheet structure produced by our customers.

7. Colors and Special Effects

6.1 Colors
Kafrit specializes in PC and PMMA color matching and can match your color according to MB sample or product sample. It is also possible to perform a match according to RAL or Pantone, in such case it might be less accurate.
Kafrit offers a wide selection of PC and PMMA colors and can supply chips catalog by request.
- Transparent colors
- Opaque colors
- Opal/diffusing colors

6.2 Special Effects
Pearlescents: Kafrit developed a special technology for pearlescent MB and compound production. Metallics: Based on aluminum pigments and often combined with different shades of pigments in order to reach the requested color (metallic green, for example). Pearlescent and metallic colors can be applied as MB in the bulk.

For best effect it is recommend to applied as thin layer under the UV layer-requires double co-extrusion technology.

Kafrit offers a variety of pearlescent and metallic colors and can supply special effects chips catalog by request.
